

Fig. 1S. light-saturated photosynthetic rate ($P_{\max}$) of six rubber tree cultivars (A: Lan 873, B: Yunyan 77-2, C: Yunyan 77-4, D: GT1, E: Reken 523, and F: Reyan 733-97) before and after night-chilling treatment at 0, 5 or 10°C and subsequent recovery in full irradiance and 50% of full irradiance. Different letters indicate significant differences among groups in full irradiance (white bars) and 50% of full irradiance (gray bars) at $P < 0.05$.
