

Fig. 2S. Images of the maximum quantum yield of PSII (F_v/F_m) in intact and detached roots of various *Arabidopsis* lines. Samples were the same as in Fig. S1. Data were obtained from the samples incubated in the dark for 15. The color scale represents the F_v/F_m value ranged from 0 (red) to 0.8 (purple). Bar = 1.0 cm.
