

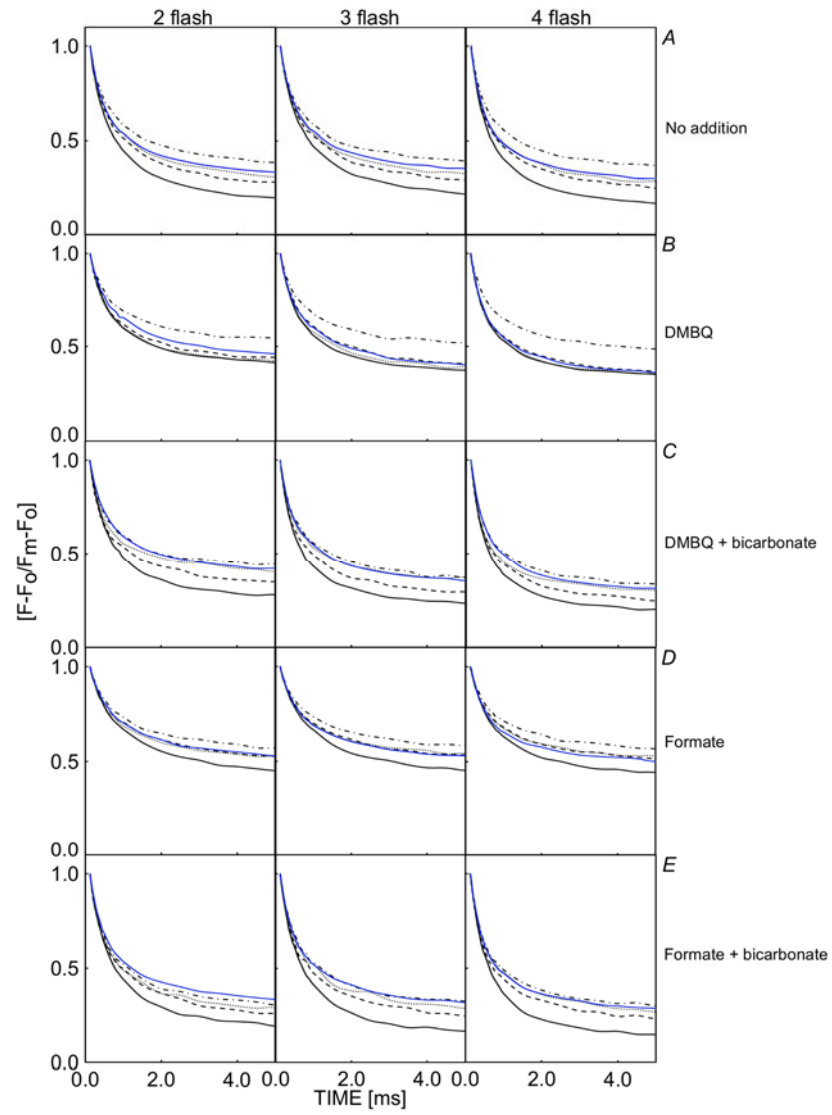

Fig. 4S. Chlorophyll *a* fluorescence relaxation for the first 5 ms, after being exposed to two, three and four actinic flashes given at 5 Hz. Wild type (black line); ΔPsbM (dots); ΔPsbY (dashes); $\Delta\text{PsbM}:\Delta\text{PsbY}$ (dashes and dots) and Y_{comp} (blue line). Data are the average of three biological replicates.
