

Fig. 1S. Changes in the amount of ferredoxin:NADP⁺ oxidoreductase (FNR) in *A.thaliana* and *E. salsuginea* plants irrigated with water and with NaCl solution. Salinity of 0.15 and 0.3 M, was used for *A. thaliana* and *E. salsuginea*, respectively. Immunoblotting was done with leaf extracts of soluble proteins, for visualization 5 µg protein per lane was loaded.
